Trinita Corp. Joins RosettaNet Global Industry Standards Organization

Trinita Incorporates RosettaNet Standards and Provides Open and Extendible Product Solutions

SAN DIEGO, Calif., March 31, 2004 – Trinita Corp., a leader in business process consulting, services and engineered solutions for the technology manufacturing and semiconductor industries, today announced it has joined RosettaNet. As a RosettaNet solution provider member, Trinita will work alongside a global consortium of electronic component, information technology logistics, semiconductor manufacturing and telecommunications companies to create, implement and promote open e-business standards.

“On behalf of the RosettaNet worldwide consortium, we are pleased to welcome Trinita Corp. as one of the newest members of our valued solution provider community,” said Jennifer Hamilton, RosettaNet President and CEO. “Working alongside leading supply chain companies, RosettaNet solution providers are truly in sync with the critical business requirements of the industry. This collaboration drives best of breed solutions in the marketplace, resulting in greater support for RosettaNet standards implementation.”

RosettaNet is focused on the collaborative development and rapid deployment of e-business processes that align supply chain partners within global trading networks. By providing an open platform of standards and services, RosettaNet enables business-to-business (B2B) integration through the electronic sharing of information, made possible by the implementation of RosettaNet Partner Interface Processes® (PIPs®). RosettaNet standards offer multiple benefits, including reduced cycle time and cost, resulting in highly effective trading networks, operational efficiencies, new business opportunities and investment protection.

With RosettaNet standards, business managers using disparate applications and data processes from multiple organizational systems are able to understand and exchange accurate information. These standards serve as the basis for real-world business alignment. For more than four years, Trinita has used RosettaNet guidelines to provide open and extensible product solutions to semiconductor manufacturers, enabling customers to connect business data and systems within their own organizations.

“Companies are looking for a common, open standard to connect with multiple trading partners and across industries,” said Jeff Slosar, President of Trinita Corporation. “Working with RosettaNet to develop and implement a common language for sharing information will directly benefit our customers and the entire semiconductor industry.”

Trinita provides products, services and solutions that help global manufacturing companies improve productivity and optimize supply chain performance. Trinita solutions tie together accurate data with functional business processes and advanced technology, giving customers the ability to actively drive their organizations.

Trinita project consultants use a disciplined approach to project management. It accommodates evolving business considerations throughout the configuration and integration of enterprise resource planning (ERP); advanced planning and scheduling (APS); and packaged or legacy manufacturing execution systems (MES). This unique approach provides cost-effective implementations that meet the evolved project requirements accurately and efficiently.

About RosettaNet

RosettaNet is a non-profit consortium dedicated to the collaborative development and rapid deployment of open internet-based business standards that align processes within the global technology trading networks. More than 500 companies, representing over \$1 trillion in annual information technology, electronic components and semiconductor manufacturing revenues, currently participate in RosettaNet's standards development, strategy and implementation activities. Information on the consortium's worldwide activities, including a complete list of partner companies, is available at www.rosettanet.org. RosettaNet is a subsidiary of the Uniform Code Council, Inc. (UCC).

About Trinita

Trinita delivers business process consulting, services and solutions for the high technology manufacturing and semiconductor industries. The Trinita team of global professionals applies knowledge and understanding of both technology and business possibilities during effective real world implementations. Trinita solutions include consulting, application development and system integration. Trinita is a certified member of the Oracle Partner Network and is also an SAP Software Partner.

Trinita customers include global technology companies such as Amkor, Qualcomm, Sony Semiconductor and Sun Microsystems. The company is headquartered in San Diego, Calif., with international operations in Europe, India and Japan. For more information about Trinita, visit their Web site at www.trinita.com or call toll free at 1-888-248-3400.
